

Microsoft 365 Reseller Website — Complete Laravel Development Requirements (intern skill test project)

1. Project Overview

Project Name: Microsoft 365 Reseller & Subscription Management Platform

Technology:

- Backend: **Laravel 11/12**
 - PHP: 8.2+
 - Database: MySQL 8+
 - Frontend: Blade + Tailwind CSS / Bootstrap
 - JavaScript: Alpine.js / Vue.js where required
 - API: REST API
 - Authentication: Laravel Sanctum / OAuth 2.0
 - Queue: Redis
 - Cache: Redis
 - Scheduler: Laravel Scheduler
 - Web Server: Apache/Nginx
 - Payment: SSLCommerz / bKash / Nagad / Stripe where applicable
 - Email: SMTP / transactional email provider
 - SMS: Bangladesh SMS gateway
 - cPanel
-

2. Main Business Model

The website should support:

B2C

Individual customers can:

1. Browse Microsoft office 365 products
2. Select a plan
3. Select number of licenses
4. Select billing period
5. Create account
6. Pay online

7. Complete Microsoft tenant/customer onboarding
8. Receive subscription information
9. Manage licenses
10. Renew subscription

B2B

Corporate customers can:

- Register company
- Add employees
- Purchase multiple licenses
- Request quotation
- Receive corporate pricing
- Manage Microsoft 365 subscriptions
- Increase/decrease seats
- Request migration
- Request technical support
- Receive invoices
- Manage multiple subscriptions

Reseller / Dealer

Your platform should also support your own downstream resellers.

Example:

Microsoft / Distributor → Freelancer Digital Experts Team → Reseller → End Customer

Resellers should have:

- Reseller wallet
 - Wholesale pricing
 - Customer management
 - Subscription management
 - Order management
 - Commission/profit tracking
 - Invoice management
 - API access
 - Support tickets
-

3. Product Categories

The system should be designed so products aren't hard-coded.

Admin should be able to create unlimited products.

Microsoft 365

Examples:

- Microsoft 365 Business Basic
- Microsoft 365 Business Standard
- Microsoft 365 Business Premium
- Microsoft 365 Apps for Business
- Microsoft 365 E3
- Microsoft 365 E5
- Microsoft 365 F3

Office Apps

- Microsoft Word
- Microsoft Excel
- Microsoft PowerPoint
- Microsoft Outlook
- Microsoft OneNote
- Microsoft Access
- Microsoft Publisher where applicable

Microsoft Teams

- Teams plans
- Teams Phone
- Teams-related add-ons

Security

- Microsoft Defender
- Defender for Business
- Microsoft Entra-related products
- Microsoft Intune
- Microsoft Purview-related products

Copilot / AI

- Microsoft 365 Copilot
- Copilot-related add-ons
- Future Microsoft AI products

Azure

Optional future module:

- Azure subscriptions
- Azure credits
- Consumption billing
- Azure services

The architecture should allow Azure to be added later without rebuilding the website.

4. Product Structure

Every product should have:

Product

- Name
- SKU
- Microsoft Product ID
- Offer ID
- Category
- Description
- Features
- License Type
- Minimum Quantity
- Maximum Quantity
- Monthly Price
- Annual Price
- Wholesale Price
- Reseller Price
- B2B Price
- Currency
- Billing Type
- Contract Term
- Auto Renewal
- Trial Available
- Status
- Microsoft API Mapping

Do **not** put Microsoft SKU IDs directly into Blade templates.

5. Pricing Engine

This is one of the most important modules.

The system should support:

Customer pricing

```
Microsoft Cost
+
Platform Margin
+
Payment Fee
+
Service Fee
=
Customer Price
```

Reseller pricing

```
Microsoft Cost
+
Wholesale Margin
=
Reseller Price
```

Corporate pricing

Example:

1-9 licenses	→ Standard price
10-49 licenses	→ Business price
50-99 licenses	→ Corporate price
100+ licenses	→ Enterprise quotation

Admin should be able to configure these rules.

6. Subscription Model

The core system should support:

Billing intervals

- Monthly
- Annual (primary focus)

Subscription statuses

Pending
Active
Trial
Suspended
Expired
Cancelled
Past Due
Provisioning
Renewal Pending
Renewed
Failed

Subscription lifecycle

Customer
↓
Select Product
↓
Select Licenses
↓
Checkout
↓
Payment
↓
Customer/Tenant Setup
↓
Microsoft Provisioning
↓
Subscription Active
↓
License Management
↓
Renewal

7. Customer Registration

Registration fields:

Individual

- Name
- Email
- Mobile
- Country
- Address
- Password
- Company optional

Business

- Company name
 - Contact person
 - Business email
 - Phone
 - Country
 - Address
 - Tax/VAT information
 - Company registration information
 - Microsoft tenant information
-

8. Microsoft Tenant Onboarding

The system should support a proper Microsoft onboarding flow.

Example:

Step 1
Create account

↓

Step 2
Enter company information

↓

Step 3
Microsoft tenant information

↓

Step 4
Microsoft authorization / relationship

↓

Step 5
Select subscription

↓

Step 6
Payment

↓

Step 7
Provision subscription

↓

Step 8
Confirmation

For CSP operations, Microsoft requires an appropriate customer relationship and Microsoft Customer Agreement.

The implementation should therefore **not simply ask customers for their Microsoft password**.

Use Microsoft-supported OAuth/authorization flows wherever applicable. (optional)

9. Microsoft API Integration

Create a dedicated Laravel service layer:

```
app/  
└── Services/  
    └── Microsoft/  
        ├── MicrosoftAuthService.php  
        ├── PartnerCenterService.php  
        ├── CustomerService.php  
        ├── SubscriptionService.php  
        ├── ProductCatalogService.php  
        ├── LicenseService.php  
        ├── OrderService.php  
        └── InvoiceService.php
```

Example:

MicrosoftPartnerService

should handle:

Authentication
Customer creation
Customer lookup
Relationship management
Product catalog
Price catalog
Subscription creation
Subscription updates
License quantity changes
Renewals
Cancellation
Order status
Billing information

Microsoft provides Partner Center REST APIs specifically for integrating CRM/billing software with customer accounts, orders and subscriptions.

10. Microsoft Authentication

Please make sure your website show Microsoft.com account login support we are official Microsoft office 365 reseller all in one solutions platforms in Bangladesh.

11. Product Synchronization

Create an automated synchronization system.

It should periodically synchronize:

- Products
- SKUs
- Offers
- Availability
- Terms
- Billing plans
- Pricing
- Status

12. Order Management

Order table:

Order ID
Customer
Reseller
Product
SKU
Quantity
Unit Price
Discount
Tax
Payment
Microsoft Order ID
Status
Created Date

Example:

Order #M365-2026-000125

Business Standard
25 licenses

Monthly
BDT XXXXX

Payment: Paid

Microsoft Status: Provisioned

13. License Management

Customer dashboard:

Microsoft 365 Business Standard
25 Licenses

Assigned: 20
Available: 5

Renewal: 10 Oct 2027
Status: Active

Actions:

- Add licenses
- Remove licenses where supported
- Change plan where supported
- Renew
- Cancel
- View subscription
- View billing
- Contact support

14. Reseller Dashboard

This should be a major feature.

Dashboard

Total Customers
Active Subscriptions
Monthly Sales
Monthly Profit
Wallet Balance
Pending Orders
Expiring Subscriptions
Support Tickets

Reseller menu

Dashboard

Customers

- └ All Customers
- └ Add Customer
- └ Customer Groups

Products

- └ Microsoft 365
- └ Office
- └ Security
- └ Copilot
- └ Azure

Subscriptions

Orders

Invoices

Wallet

Transactions

Commissions

Reports

API

Support

Profile

15. Reseller Wallet

Example:

Wallet Balance

BDT 125,500

Available Credit

BDT 100,000

Pending

BDT 10,000

Wallet functions:

- Add funds
- Admin credit
- Debit
- Refund
- Subscription purchase
- Transaction history
- Wallet invoice
- Payment gateway integration

16. Reseller API

This is highly recommended.

Your reseller can integrate your platform with their own website.

Example:

```
POST /api/v1/orders
GET /api/v1/products
GET /api/v1/subscriptions
GET /api/v1/customers
POST /api/v1/customers
POST /api/v1/subscriptions
POST /api/v1/subscriptions/{id}/renew
```

Authentication:

```
API Key
+
API Secret
```

Optional:

```
OAuth 2.0
```

17. Admin Panel

Use Laravel-based admin panel.

Recommended:

Filament

Admin dashboard:

```
Revenue
Profit
Orders
Subscriptions
Customers
Resellers
Products
Payments
Invoices
Renewals
API Usage
Support
Microsoft API Status
System Logs
```

18. Admin Product Management

Admin can:

Create Product
Edit Product
Delete Product
Disable Product
Set Pricing
Set Wholesale Pricing
Set Reseller Pricing
Set Monthly Price
Set Annual Price
Set Margin
Set SKU
Set Microsoft Offer ID
Set Trial
Set Renewal Rules

19. Customer Dashboard

Customer dashboard should display:

Overview

Active Subscriptions
Upcoming Renewals
Invoices
Payments
Licenses
Support Tickets

Subscription

Microsoft 365 Business Premium

10 Licenses

Status: Active

Started:
01 September 2026

Renewal:
01 September 2027

20. Checkout System

Checkout should be multi-step.

Step 1

Product

Step 2

License quantity

Step 3

Billing period

Step 4

Customer information

Step 5

Microsoft information

Step 6

Payment

Step 7

Provisioning

Step 8

Confirmation

21. Payment Gateway

For Bangladesh:

Primary

- Moneybag
- bKash
- Nagad

Payment statuses:

Pending
Processing
Paid
Failed
Cancelled
Refunded
Partially Refunded

22. Invoice System

Automatically generate:

Invoice Number
Customer
Company
Product
License Quantity
Billing Period
Subtotal
Discount
Tax
Payment Gateway Fee
Total
Payment Status
Due Date

PDF invoice.

23. Automatic Renewal

Laravel Scheduler:

Daily

Check:

30 days before expiry
15 days before expiry
7 days before expiry
3 days before expiry
1 day before expiry

Send:

Email
SMS
Dashboard notification

Example:

Your Microsoft 365 Business Standard subscription expires in 7 days.

24. Auto-Renewal

Customer can select:

☒ Enable automatic renewal

System checks:

Payment Method
↓
Payment
↓
Renew Subscription
↓
Microsoft API
↓
Update Subscription
↓
Invoice
↓
Email

25. Failed Payment System

If payment fails:

Payment Failed
↓
Retry
↓
Email
↓
SMS
↓
Grace Period
↓
Suspension

Admin should configure:

Grace Period = 7 days

26. Coupon System

Admin can create:

WELCOME365
OFFICE20
CORPORATE10
RESELLER50

Rules:

- Fixed discount
 - Percentage discount
 - Product-specific
 - Customer-specific
 - Reseller-specific
 - First-order only
 - Expiry date
 - Maximum usage
 - Minimum quantity
-

27. Corporate Quotation System

Very important for B2B.

Customer:

Request Corporate Quote

Fields:

Company
Contact Person
Email
Phone
Number of Users
Required Products
Expected Start Date
Message

Admin can create:

Quotation

Customer can:

Accept

Reject

Request Modification

Accepted quotation converts to:

Order

28. Support Ticket System

Categories:

Microsoft 365 Setup

License Issue

Payment

Renewal

Migration

Email

Outlook

Teams

OneDrive

SharePoint

Security

Other

Ticket statuses:

Open

In Progress

Waiting for Customer

Resolved

Closed

29. Email Notifications

Create notification templates:

Welcome Email

Order Confirmation

Payment Successful

Payment Failed

Subscription Activated
Subscription Expiring
Subscription Renewed
Subscription Suspended
Subscription Cancelled
Invoice Generated
Password Reset
Support Ticket
Quote Generated

30. SMS Notifications

Optional:

Order confirmation
Payment confirmation
Renewal reminder
Subscription expiry
Support notification

31. Affiliate System

Optional but highly useful.

Users can become affiliates.

Example:

Affiliate Commission
5%

Affiliate dashboard:

Clicks
Registrations
Orders
Commission
Paid
Pending

32. Referral System

Customer gets:

Referral Code

Example:

MAHFUZ365

New customer gets discount.

Referrer receives credit.

33. Multi-Currency

Initially:

BDT

Architecture should support:

USD

EUR

GBP

SAR

AED

with currency tables and exchange-rate support.

34. Tax System

Configurable:

VAT

Tax

Service Charge

Admin can define tax rules by:

Country

Product

Customer Type

Business Type

35. Database Architecture

Core tables:

users
roles
permissions

companies
customers
resellers

products
product_categories
product_variants
product_prices

microsoft_products
microsoft_skus
microsoft_offers
microsoft_price_lists

subscriptions
subscription_items
subscription_events

orders
order_items

payments
payment_transactions

invoices
invoice_items

wallets
wallet_transactions

coupons
coupon_usages

quotations
quotation_items

support_tickets
support_messages

notifications

affiliate_accounts
affiliate_commissions

api_clients
api_logs

webhooks
webhook_logs

audit_logs
system_logs

36. Important Subscription Tables

subscriptions

id
customer_id
reseller_id
product_id
microsoft_subscription_id
microsoft_order_id
sku_id
quantity
billing_cycle
term
start_date
end_date
renewal_date
auto_renew
status
unit_price
total_price
currency
created_at
updated_at

subscription_events

id
subscription_id
event
old_status
new_status
metadata
created_at

This gives you a complete audit trail.

37. Webhook System

Create:

/api/webhooks/microsoft

and payment webhooks:

/api/webhooks/sslcommerz

/api/webhooks/bkash

/api/webhooks/nagad

Webhook processing should use queues.

Example:

Webhook

Validate Signature

Store Event

Queue Job

Process

Update Subscription

Notify Customer

38. Queue Architecture

Use:

Redis

+

Laravel Queue

Jobs:

SyncMicrosoftProducts

CreateMicrosoftCustomer

CreateMicrosoftSubscription

UpdateMicrosoftSubscription

RenewSubscription

ProcessPayment

GenerateInvoice

SendRenewalEmail

SendSMS

ProcessWebhook

SyncSubscriptionStatus

39. Scheduled Commands

Example:

```
php artisan microsoft:sync-products
php artisan microsoft:sync-subscriptions
php artisan subscriptions:check-expiry
php artisan subscriptions:process-renewals
php artisan invoices:generate
php artisan notifications:send
```

Cron:

```
* * * * * php /path/artisan schedule:run
```

40. Security Requirements

This system handles:

- Customer information
- Payment information
- Microsoft tenant information
- API credentials
- Subscription data

Therefore:

Required

- HTTPS
- CSRF protection
- XSS protection
- SQL injection protection
- Rate limiting
- MFA for admin
- Strong password policy
- Encrypted secrets
- Encrypted sensitive database fields
- Secure API authentication
- Audit logging
- Login attempt protection
- IP/device logging
- Role-based permissions
- Secure webhook validation

- Queue isolation
- Database backups

Microsoft's current CSP security requirements emphasize MFA for administrative users and other security controls, so your platform should be designed around strong administrative security from day one.

41. RBAC

Roles:

Super Admin
Admin
Finance Manager
Sales Manager
Support Manager
Technical Manager
Reseller
Corporate Customer
Customer
Affiliate

Permission examples:

products.view
products.create
products.update

orders.view
orders.create
orders.cancel

subscriptions.view
subscriptions.create
subscriptions.renew

customers.view
customers.create

resellers.view
resellers.create

payments.view
refunds.create

reports.view

42. Audit Log

Every sensitive operation should be logged.

Example:

Admin: Mahfuz
Action: Changed subscription quantity

Customer: ABC Ltd
Old Quantity: 20
New Quantity: 30

IP: XXXXX
Date: XXXXX

43. Website Frontend

Homepage

Sections:

Hero
Microsoft 365 Products
Business Solutions
Why Choose Us
Microsoft 365 Benefits
Plans
Corporate Solutions
Reseller Program
Customer Reviews
FAQ
Support
CTA
Footer

44. Product Page

Example:

Microsoft 365 Business Standard

Display:

6XXX / user / month

- ✓ Word
- ✓ Excel
- ✓ PowerPoint
- ✓ Outlook
- ✓ Teams
- ✓ OneDrive
- ✓ SharePoint

[Buy Now]
[Request Corporate Quote]

45. Product Comparison

Example:

Feature	Basic	Standard	Premium
Word	✓	✓	✓
Excel	✓	✓	✓
PowerPoint	✓	✓	✓
Outlook	✓	✓	✓
OneDrive	✓	✓	✓
Desktop Apps	—	✓	✓
Advanced Security	—	—	✓

Product features should be maintained through the admin panel rather than hard-coded.

46. Reseller Landing Page

Create:

Become a Microsoft 365 Reseller

Sections:

Wholesale Pricing
Recurring Revenue
Partner Dashboard
Automated Subscription Management
API Integration

Customer Management
Technical Support
Reporting

CTA:

Become a Reseller

47. SEO System

Admin should control:

SEO Title
Meta Description
Keywords
Canonical URL
OG Title
OG Description
OG Image
Schema

Dynamic pages:

/microsoft-365
/microsoft-365/business-basic
/microsoft-365/business-standard
/microsoft-365/business-premium
/microsoft-365/copilot
/microsoft-365-for-business
/microsoft-365-for-enterprise

48. Blog / Content Management

CMS:

Posts
Categories
Tags
Authors
Featured Image
SEO
Publish Schedule

Content topics:

Microsoft 365 Guide

Office 365 Guide
Business Email
Microsoft Teams
OneDrive
SharePoint
Cybersecurity
Copilot
Cloud Productivity

49. Admin Reports

Sales

Daily Sales
Weekly Sales
Monthly Sales
Annual Sales

Profit

Microsoft Cost
Selling Price
Gross Profit
Payment Fee
Net Profit

Subscription

Active
Expired
Cancelled
Renewing
Suspended

Reseller

Top Resellers
Reseller Revenue
Reseller Profit
Reseller Customers

50. Financial Dashboard

Example:

Today's Sales	₹45,000
Monthly Sales	₹850,000

Microsoft Cost	£620,000
Gross Profit	£230,000
Payment Fees	£12,000
Net Profit	£218,000

51. Microsoft Cost vs Selling Price

Every subscription should internally track:

Microsoft Cost
Distributor Cost
Platform Cost
Payment Cost
Customer Price
Reseller Price
Gross Profit

This is particularly important for your reseller business because your public selling price and actual Microsoft/distributor acquisition cost may change.

52. Subscription Expiry Dashboard

Admin:

Expiring Today	12
Next 7 Days	43
Next 30 Days	187
Next 90 Days	510

Clicking the number shows the subscriptions.

53. Customer CRM

Customer profile:

Customer Information
Company Information
Microsoft Tenant
Orders
Subscriptions
Payments
Invoices

Support Tickets
Notes
Activity

54. Reseller CRM

Reseller profile:

Company
Contact
Partner ID
Status
Wallet
Credit Limit
Customers
Orders
Revenue
Profit
Subscriptions
Commission
API Keys
Support

55. Credit System

For approved B2B resellers:

Credit Limit: ₪500,000

Used Credit: ₪125,000

Available Credit: ₪375,000

Admin can approve/reject credit.

56. Manual Provisioning Fallback

Very important.

If Microsoft API fails:

Payment Successful
↓

```
API Provisioning Failed
  ↓
Order = Provisioning Failed
  ↓
Admin Alert
  ↓
Manual Provisioning
  ↓
Admin enters Microsoft Subscription ID
  ↓
Order Activated
```

Never automatically mark a subscription **Active** merely because payment succeeded.

57. API Failure Handling

Implement:

```
Retry 1
Retry 2
Retry 3
```

Then:

```
Manual Review
```

Store:

```
HTTP Status
Response
Request ID
Microsoft Error Code
Timestamp
```

58. Idempotency

Critical for payment and Microsoft order creation.

Example:

```
Order #10025
Idempotency Key:
M365-10025-PROVISION
```

If the API request is accidentally repeated, the platform must not create two subscriptions.

59. Microsoft API Architecture

I recommend this architecture:

```
Laravel Application
|
+---- Microsoft Auth Service
|
+---- Partner Center Service
|
+---- Product Catalog Service
|
+---- Customer Service
|
+---- Subscription Service
|
+---- License Service
|
+---- Webhook Service
|
+---- Queue
|
+---- Redis
|
+---- MySQL
```

This makes it much easier to change distributor/API providers later.

60. Distributor Integration

Because an indirect reseller works through an indirect provider, do **not** build the system assuming you will directly call Microsoft's full CSP transaction APIs in every scenario.

Your architecture should support:

```
Provider API
↓
Your Laravel API Adapter
↓
Internal Subscription Service
```

and potentially:

```
Microsoft Partner Center
↓
```

Your Laravel Integration

depending on your actual CSP relationship and API permissions.

Microsoft explicitly states that indirect resellers work with indirect providers, while direct providers handle the Microsoft relationship.

61. API Adapter Pattern

Build:

```
interface MicrosoftProviderInterface
{
    public function getProducts();
    public function createCustomer();
    public function createSubscription();
    public function updateSubscription();
    public function renewSubscription();
    public function cancelSubscription();
    public function getSubscription();
}
```

Then:

```
MicrosoftPartnerCenterProvider
DistributorProvider
ManualProvider
```

can implement the same interface.

This is a **very important architectural decision**.

62. Recommended Laravel Folder Structure

```
app/
├── Console/
├── Http/
│   ├── Controllers/
│   │   ├── Admin/
│   │   ├── Customer/
│   │   ├── Reseller/
│   │   ├── Api/
│   │   └── Auth/
│   └── Middleware/
```

63. API Versioning

Use:

```
/api/v1/
```

Example:

```
/api/v1/products  
/api/v1/customers  
/api/v1/orders  
/api/v1/subscriptions  
/api/v1/invoices  
/api/v1/resellers
```

Future:

```
/api/v2/
```

64. Development Phases

Phase 1 — Foundation

- Laravel setup
- Database
- Authentication
- RBAC

- Admin
- Customer
- Reseller

Phase 2 — E-commerce

- Product catalog
- Pricing
- Cart
- Checkout
- Orders
- Coupons
- Payments

Phase 3 — Subscription

- Subscription engine
- Renewals
- Expiry
- Auto-renewal
- License quantities

Phase 4 — Microsoft

- Entra authentication
- Partner Center integration
- Product synchronization
- Customer integration
- Subscription provisioning
- License management

Phase 5 — Reseller

- Wallet
- Wholesale pricing
- Reseller API
- Credit
- Commission
- Customer management

Phase 6 — B2B

- Corporate accounts
- Quotes

- Bulk licensing
- Invoices
- Contracts
- Account management

Phase 7 — Automation

- Queue
- Cron
- Notifications
- Renewal automation
- Webhooks
- Failed payment recovery

Phase 8 — Security

- MFA
- Audit logs
- Rate limiting
- Encryption
- API security
- Backup
- Monitoring

65. MVP vs Full Version

MVP

- ✓ Website
- ✓ Product catalog
- ✓ Customer registration
- ✓ Admin
- ✓ Checkout
- ✓ Payment
- ✓ Orders
- ✓ Subscription
- ✓ Invoice
- ✓ Microsoft integration
- ✓ Renewal
- ✓ Email

Full Enterprise Version

- ✓ Everything in MVP
 - ✓ Reseller portal
 - ✓ Wallet
 - ✓ Credit system
 - ✓ Reseller API
 - ✓ Corporate accounts
 - ✓ Quotation
 - ✓ Affiliate
 - ✓ Multi-currency
 - ✓ CRM
 - ✓ Advanced reporting
 - ✓ Azure
 - ✓ Microsoft Copilot
 - ✓ Support center
 - ✓ Automated provisioning
 - ✓ Automated renewal
 - ✓ Advanced security
-

66. Most Important Business Rule

I would build the system around this principle:

Payment, subscription creation, Microsoft provisioning, and subscription activation are separate states.

For example:

```
ORDER CREATED
  ↓
PAYMENT SUCCESSFUL
  ↓
PROVISIONING
  ↓
MICROSOFT CONFIRMED
  ↓
SUBSCRIPTION ACTIVE
```

Not:

```
Payment Successful → Active
```

This prevents customers from receiving an "Active" subscription when the Microsoft-side provisioning actually failed.

67. Recommended Technology Stack

Component	Recommendation
Backend	Laravel 12
PHP	8.3+
Database	MySQL 8
Admin	Filament
Frontend	Blade + Tailwind
Dynamic UI	Livewire/Alpine
API	Laravel Sanctum
Queue	Redis
Cache	Redis
Scheduler	Laravel Scheduler
Authentication	Laravel + Microsoft Entra ID
Payment BD	SSLCommerz / bKash / Nagad
Email	SMTP/API
SMS	Local SMS API
Storage	S3-compatible
Server	VPS/Cloud
SSL	Let's Encrypt
Monitoring	Sentry/Uptime monitoring
Version control	Git

68. Critical Microsoft Compliance Point

The website should **not claim "Microsoft Authorized Reseller", "Microsoft Partner", "CSP", or similar status unless your company actually has the corresponding authorization.**

The software should also separate:

Microsoft product

from:

Your own service/management fee

and clearly identify your actual reseller model.

Microsoft's current documentation distinguishes direct-bill partners, indirect providers and indirect resellers, with different requirements and capabilities.

69. Final System Architecture

The complete platform should ultimately look like:

This architecture would give you a **real Microsoft 365 reseller platform**, rather than a simple Laravel store.

Microsoft also provides APIs for managing customer/subscription/order workflows, so the integration layer should be built as a dedicated service rather than mixing Microsoft API calls throughout the Laravel controllers.
